

## **B.W.WILLIAMS BUILDER**

Dear Redstone Team:

I would like the opportunity to express my appreciation for your product. One of our favorite clients asked if we could renovate a cellar storage area in their waterfront home. The space was always referred to as “the pit.” It was previously unfinished, very wet (the humidifier never stopped running), dank, musty, and situated under a stone patio. What the couple wanted was a dry space to hold items that are not used year round. The space would have to be climate controlled because many of the items planned for storage are valuable. We considered conventional approaches to building the space out but after considering the risks of moisture and molds, we believed Redstone MOMA and Redstone PURA would provide the best return on investment. Shortly after the Redstone installation was complete the climate within the space changed drastically – the smell was gone, the air was dryer. While we originally planned to install two dehumidifiers we now have one which runs only occasionally. When comparing the Redstone installation to conventional methods, I find it superior not only because of the way it reduces moisture but also because in our case it eliminated the need for framing, insulation, drywall, and painting. It is a complete system that does it all, and last but not least it mitigates our concern about molds and mildews. I am thoroughly impressed with Redstone products and I have already recommended it to another client. Thanks for your help.
